

## POINT

# Temporary protection of large size technical and scientific metallic equipment in non-controlled atmospheres (HE-Arc CR)

### OBJECTIVES

The objective of this project is to optimise the formulation and mode of application of specific protection systems for the surface of copper and iron-based large size technical artefacts stored or exhibited in an uncontrolled environment or outdoor.

### PROGRAM

Two protection systems (sodium carboxylates and carboxylatation solutions) are currently tested on a series of artificial metal coupons and artefacts from the Historical Swiss Army Material Foundation (Foundation HAM).

The project is still in progress.
