Reference collection from the Historischer Autofriedhof Gürbetal

OBJECTIVES

The aim of this project is the creation of a reference collection from derelict automobiles.

PROGRAM

The forced removal of the car cemetery of Kaufdorf near Bern made it possible to sample a range of cars dating from 1930ies onwards.

Metals, fabrics, wood, lubricants and various dashboard instruments were collected on short notice.

The collection constitutes a teaching and research tool for a better understanding of outdoor deterioration processes.
